Selecting the right SpillTech Mat for your needs

Determine the TYPE of liquids being absorbed:

Universal –
For oil- or water-based liquids (oils, coolants, solvents and water)

Oil Only –
For oils and oil-based liquids, not water (oil, diesel, gas, petroleum and fuels)

HazMat –
For chemicals and unknown liquids (acids, bases)

Determine the AMOUNT of liquid being absorbed:

LightWeight –
Small spill or slow drip

MediumWeight –
Consistent leak or drip, medium spill

HeavyWeight –
Flowing leak or drip, large spill

Consider the APPLICATION:

- **Small leaks or drips:**
  Choose a 1- or 2- ply absorbent
- **Larger spills, wiping or the presence of foot traffic:**
  Choose a more durable 3-ply absorbent
- **Abrasive tasks:**
  Choose an absorbent with a spunbond top layer to reduce linting or tearing
- **Mat construction**
  Check out the TechSpec on each mat presentation for details about mat construction

Smart Selection Tip:

Perf-free for better performance on water!

Choosing a mat with perforations can be advantageous for some applications. If you'd like flexibility in choosing your mat size, for example, perforations allow you to take what you need and save money.

For water applications, however, perforations can be a disadvantage. Whether it's on a stream, retention pond or open water, deploying mats to soak up an oily spill on water is just the first step. You also need to retrieve them once they're saturated and heavy.

SpillTech's Responder Mats are not scored or perfed, so after doing their job, they hold together while being hauled back ashore for easier, quicker cleanup.

WATER ABSORBING FLAT SOCKS & PILLOWS

Unobtrusive sorbent is easy to store; absorbs water leaks in retail and institutional settings.

WATER ABSORBENCY: Suited for water; not for use with acids, bases or aggressive fluids

APPLICATION: Leaks and Condensation

AVAILABLE IN:

FEATURES AND BENEFITS

- Superabsorbent polymer (SAP) sock offers excellent water absorption
- Ideal for handling water leaks, spills and condensation in large freezer or cooler areas in hospitals, restaurants, convenience stores and other institutions
- Flat socks weigh less than traditional socks, making them cheaper to ship; low-profile design takes up less room for convenient storage
- As it absorbs, the sock swells and alerts workers to a spill
- 100% post-industrial recycled filler
- Suited for water; not for use with acids, bases or aggressive fluids

Socks and Pillows with Superpowers!

SAP (Superabsorbent polymer) filling gives these Water Absorbing Socks and Pillows excellent absorbency and a low-profile design that's perfect for retail settings.

Smart Selection Tip:

Superabsorbent Polymer

How does it work?

Superabsorbent Polymer (SAP) can absorb and retain extremely large amounts of a liquid relative to its own mass. When used in our Flat Socks and Pillows, it allows for a low-profile until water is absorbed. Once it takes on water, however, it swells to alert workers that a leak or spill has occurred.

Socks start out flat for a low profile around freezers or coolers, then swell as the superabsorbent polymer takes on water.

Workers are alerted that a spill has occurred as the pillow's SAP filling swells upon absorption.

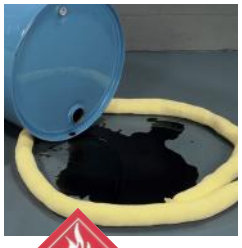
BUILD A CUSTOM SPILL KIT WITH JUST WHAT YOU NEED!

Get the perfect Spill Kit for your application.

If you can't find exactly what you need in our selection of pre-packed kits, we'll be glad to build one to your specifications. Answer five simple questions (at right) to help choose the type and quantity of sorbents you require, the accessories to make the response safer and the container that will work best. There's no extra charge for this service, so it's an easy way to customize your spill response plan and stock only the sorbents and PPE you really need. After you've made your list, just contact your local Distributor and we'll do the rest!

1. How much do you need to absorb?

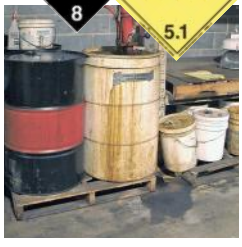


What is your worst-case scenario? You'll need enough sorbents to clean up the maximum amount, whether it's one gallon or one hundred.

2. What liquid are you absorbing?

For multiple everyday liquids, use Universal. To soak up oil and repel water, choose Oil-Only. To alert workers to a dangerous spill, use HazMat.

3. What type of spills do you deal with?



Slops and spills use pads for quick wiping and cleanup. Drum/tank leaks need more socks for diking and Plug & Dike epoxy to stop the flow. Large-volume spills require booms for containment and pillows for more sorbency.

4. What type of PPE and accessories will you need?

Most spills call for boots, gloves and goggles. Will you need coveralls? How much chemical protection do you need? How often will you have to replace disposable items?

5. What type of container will you need?

For removing saturated sorbents, use a UN-rated Overpack/Salvage Drum. Stationary Kits can go in a flat-bottom Overpack. Movable kits require a kaddie or wheeled overpack.

OverPacks and OverPack Salvage Drums

Whether you're building a spill kit, collecting used absorbents or shipping damaged containers, we'll get you packed.

Our OverPacks are sturdy, chemical-resistant for years of use and come in many sizes.

Most offer integrated forklift ledges or handles, which make them easy to lift, move or carry.

Avoid the extra expense of a dolly when you buy a wheeled version, which provides you with great versatility in a single integrated product.

When you need the additional confidence of an OverPack Salvage Drum for shipping, ours are UN X- or Y- Rated and are DOT Certified.

Smart Selection Tip:

Overpacks vs. Salvage Drums

What's the difference?

An ***OverPack*** is an outer packaging that holds and protects one or more intact, undamaged smaller containers of hazardous materials. A ***Salvage Drum*** is a metal or plastic open-head drum, tested to DOT requirements, used to transport damaged, defective, leaking or non-conforming hazardous materials packages, or hazardous materials that have spilled or leaked.
